# LOGI-Soft®
# global production

**Problem definition:**

Market demands are changing constantly, meaning suppliers today must be able to adapt to these changes efficiently and economically.

Creativity, innovation, models, and colors, highlight collection diversity. Furthermore, technological, functional, and safety requests from customers have resulted in new requirements such as:

• Higher productivity levels and smaller series
• Ability to adapt to ever-changing customer demands
• Availability of all materials required for production
• Delivery of the correct quantity at the correct time
• Provision of other necessary resources
• Synchronization of production processes
• Ability to process large quantities of data
• Availability of all current deadlines over web applications

**The solution: LOGI-Soft® global production**

*LOGI-Soft® global production* efficiently and flexibly manages the procurement process of required materials, as well as the production of goods in various global locations.

**Product scope:**

• Master data, material lists, calculations, forecasts
• Proposals, customer orders, invoicing, customer service
• Sales and production planning
• Material and commodities procurement
• Order production and transport
• Warehouse management and shipping

**Additonal modules:**

• *sales.agent* (Online order collection)
• *key.facts* (Key corporate figures)
• *webshop.b2b* (Webshop for specialist trade)
