# sales.agent

Our innovative *sales.agent* tool enables your new season collection to be presented to potential buyers in a relaxed and professional manner. The showroom feature displays products and provides all relevant product information. Customer orders can be collected efficiently and in real-time either conventionally or via the shortlisted products in the showroom. The Customer Relationship Management (CRM) section stores important customer information such as contact details, current order statuses, as well as comparable sales figures from previous years and seasons.

Order collection:
- Select model via the shortlisted products
- Efficient order collection via pre-defined assortments
- Collect orders either from warehouse stocks or based on a specified future date

CRM function:
- Graphical representation of various statistics
- Information on all open orders and current delivery status
- Sales history information

Showroom

Technical characteristics:
- Simple web / online solution
- Tablet optimized
- Runs on all standard web browsers and operating systems
- Real time data and stock information for all users

Benefits:
- Short, clear introduction of program structure
- Real time data and information for all users
- Simple entry function and intuitive operation
- Optimal presentation through high-resolution graphics / images
