

store.scanner

Our barcode scanners and *store.scanner* program are central tools which ensure that business processes operate as securely and efficiently as possible. Our scanners are integrated with LOGI-Soft® and all processes are instantly scanned into this ERP system. This means all users are always on the same basis of information.

Highlights:

- Optimization of all business processes using barcode scanners
- Areas of application include: Material, production, storage / warehousing, and dispatch
- Scanning processes and freight / shipping controls are accurate and more efficient
- Inventory can be recorded online without manually counting lists

Highlights:

- Personalized processes through the allocation of scanning to employees
- Tracking of various steps within the production process
- Optimized order-picking
- Controlled shipping through scanning of the EAN
- Bilingual: English and German

Benefits:

- Reduced delivery errors through the scanning and tracking of the EAN
- Instant online processing of stock levels
- Reduced inventory costs and errors
- Real time data and information for all users
