webshop.ci

integratedsystems
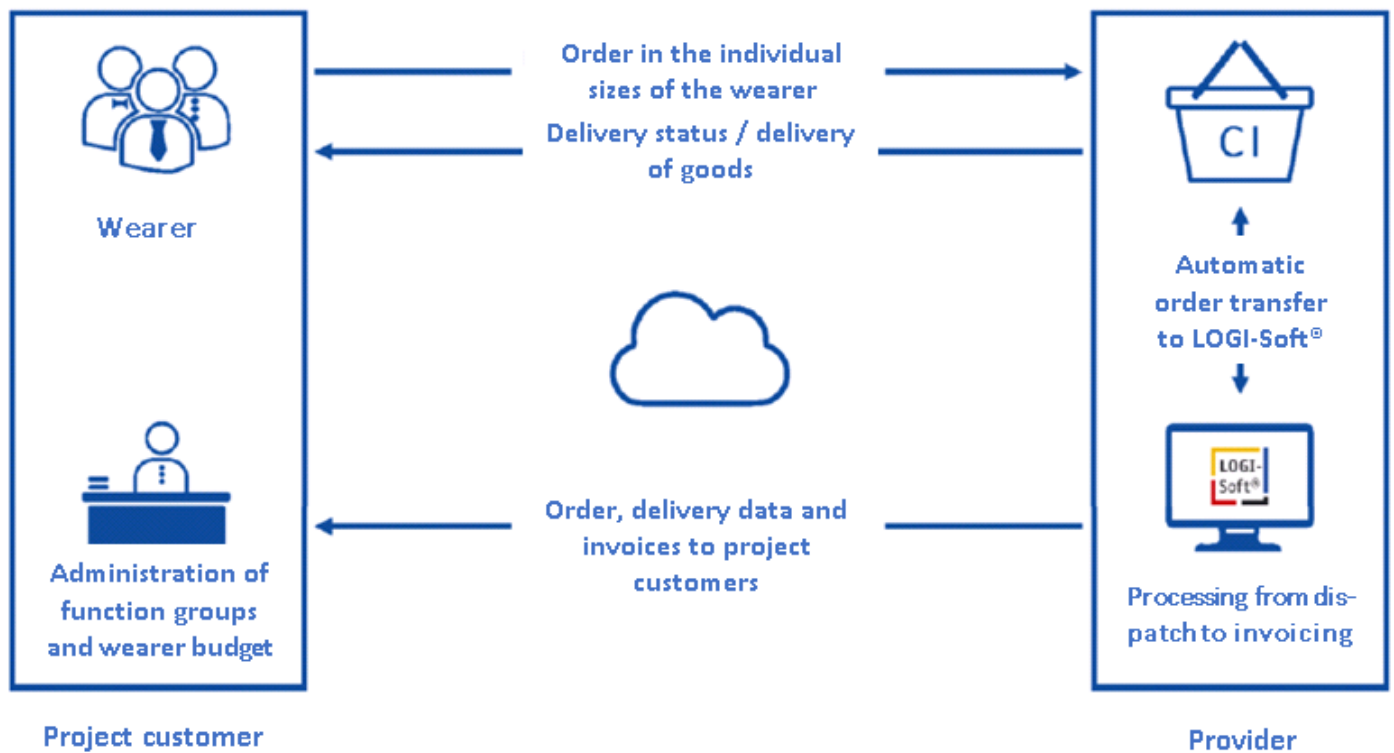

webshop.ci is a web-based shop system, which was designed in cooperation with our customers. It was developed for users with a specific requirement profile for handling order processes. Especially for manufacturers with individual clothing concepts such as occupational safety, workwear, business or functional clothing.

The manufacturer provides the project customer with his own web shop and design. In this way, the project customer's corporate identity (CI) can be mapped. The wearer (e.g. employee of the project customer) orders models assigned to his function group directly from the manufacturer.

The Functionality:
- Display of models depending on the function group of the wearer
- Size presetting of the wearer
- Special authorizations of the processing employee
- Support of different order modes (annual or additional order)
- Administration of wearer data
- Wearer related budget management

The advantages:
- Use the customer-specific webshop to win new customers for your company
- Set new standards for customer loyalty
- Offer your customers advanced services such as eProcurement
- Order confirmations via PDF and e-mail
- Support of different customer warehouses
- Bilingual: German and English
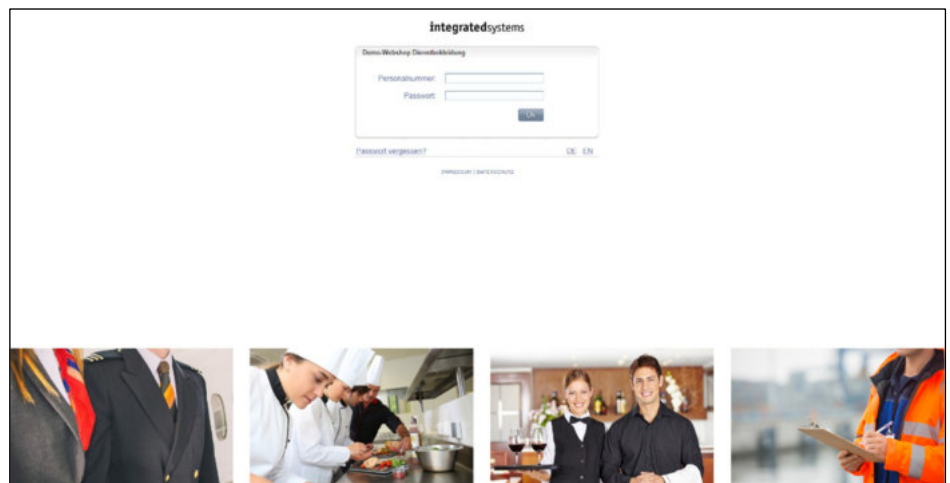

integratedsystems

webshop.ci

is Integrated Systems AG's *webshop.ci* offers a web-based wearer webshop to companies with individual clothing concepts. It shows various models / function groups and individual sizes according to the CI (Corporate Identity) specifications of the respective project customer.
