grössen_sizes

What is it?

tech.connect is a web solution to interchange data between the ERP system and **DESMA** machine planning software.

What does the software do?

The solution manages and interchanges master data, planning and material data, machinery data, and other information via a central platform and automatically creates an optimized plan for your **DESMA** machines with a transfer directly to the machine.

What are the benefits?

- Supports your production planner for optimized and efficient planning
- Interface/communication of data between ERP system and **DESMA** direct soling machine software
- No redundant data. Data is saved in the **tech.connect** database
- Real-time information available
- Planning/procurement of required uppers and material
- Industry 4.0 focus

Our future vision of shoe manufacturing

Networking of different partner processes in real-time
Industry 4.0 transformation
Digitalisation of manufacturing processes
Smart manufacturing
Flexible factory floors

Business software from the specialist

Thank you very much for your attention!
